

# Neton

Cross-ecosystem operation protocol  
between Near and TON/Telegram

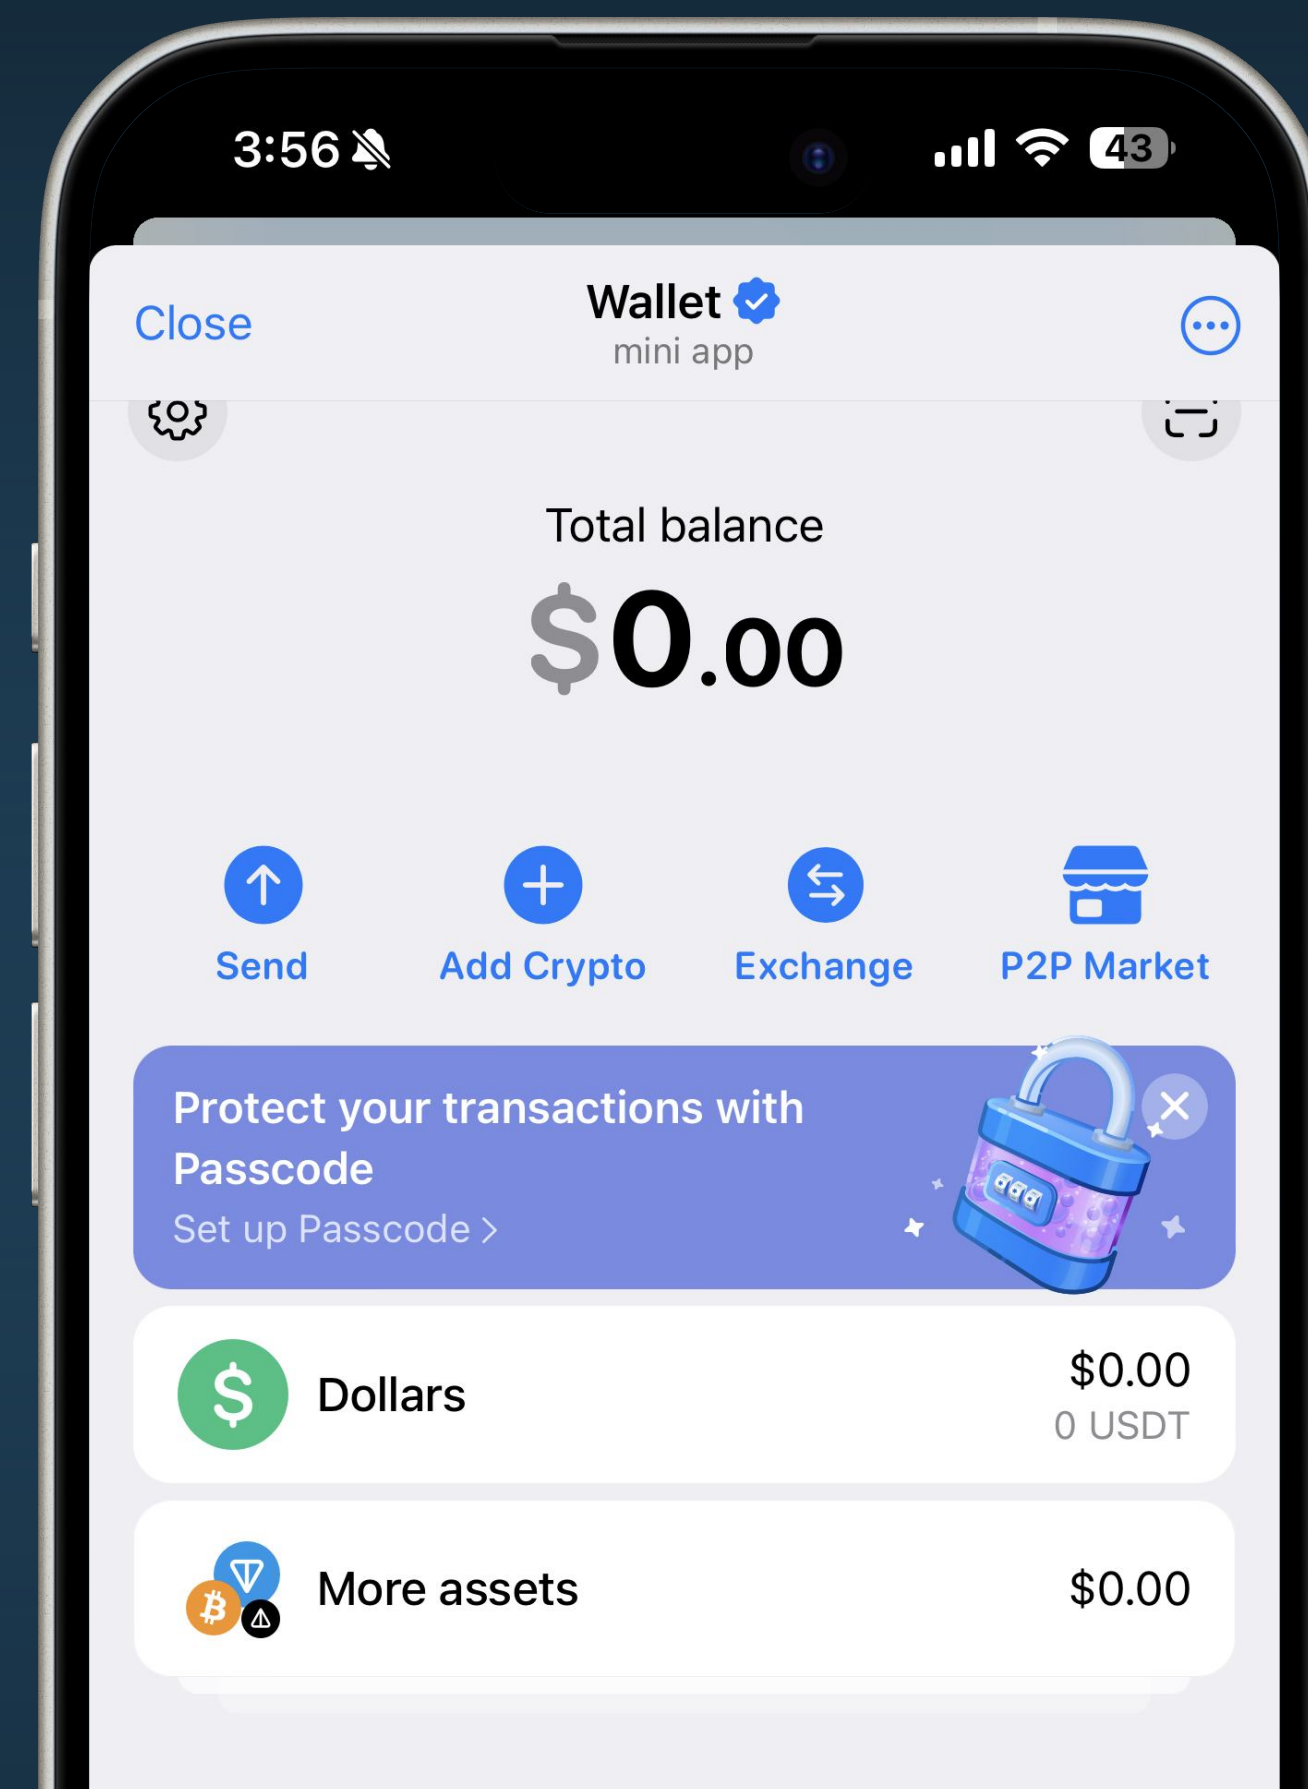

# ✦ TON as a Native Settlement Chain

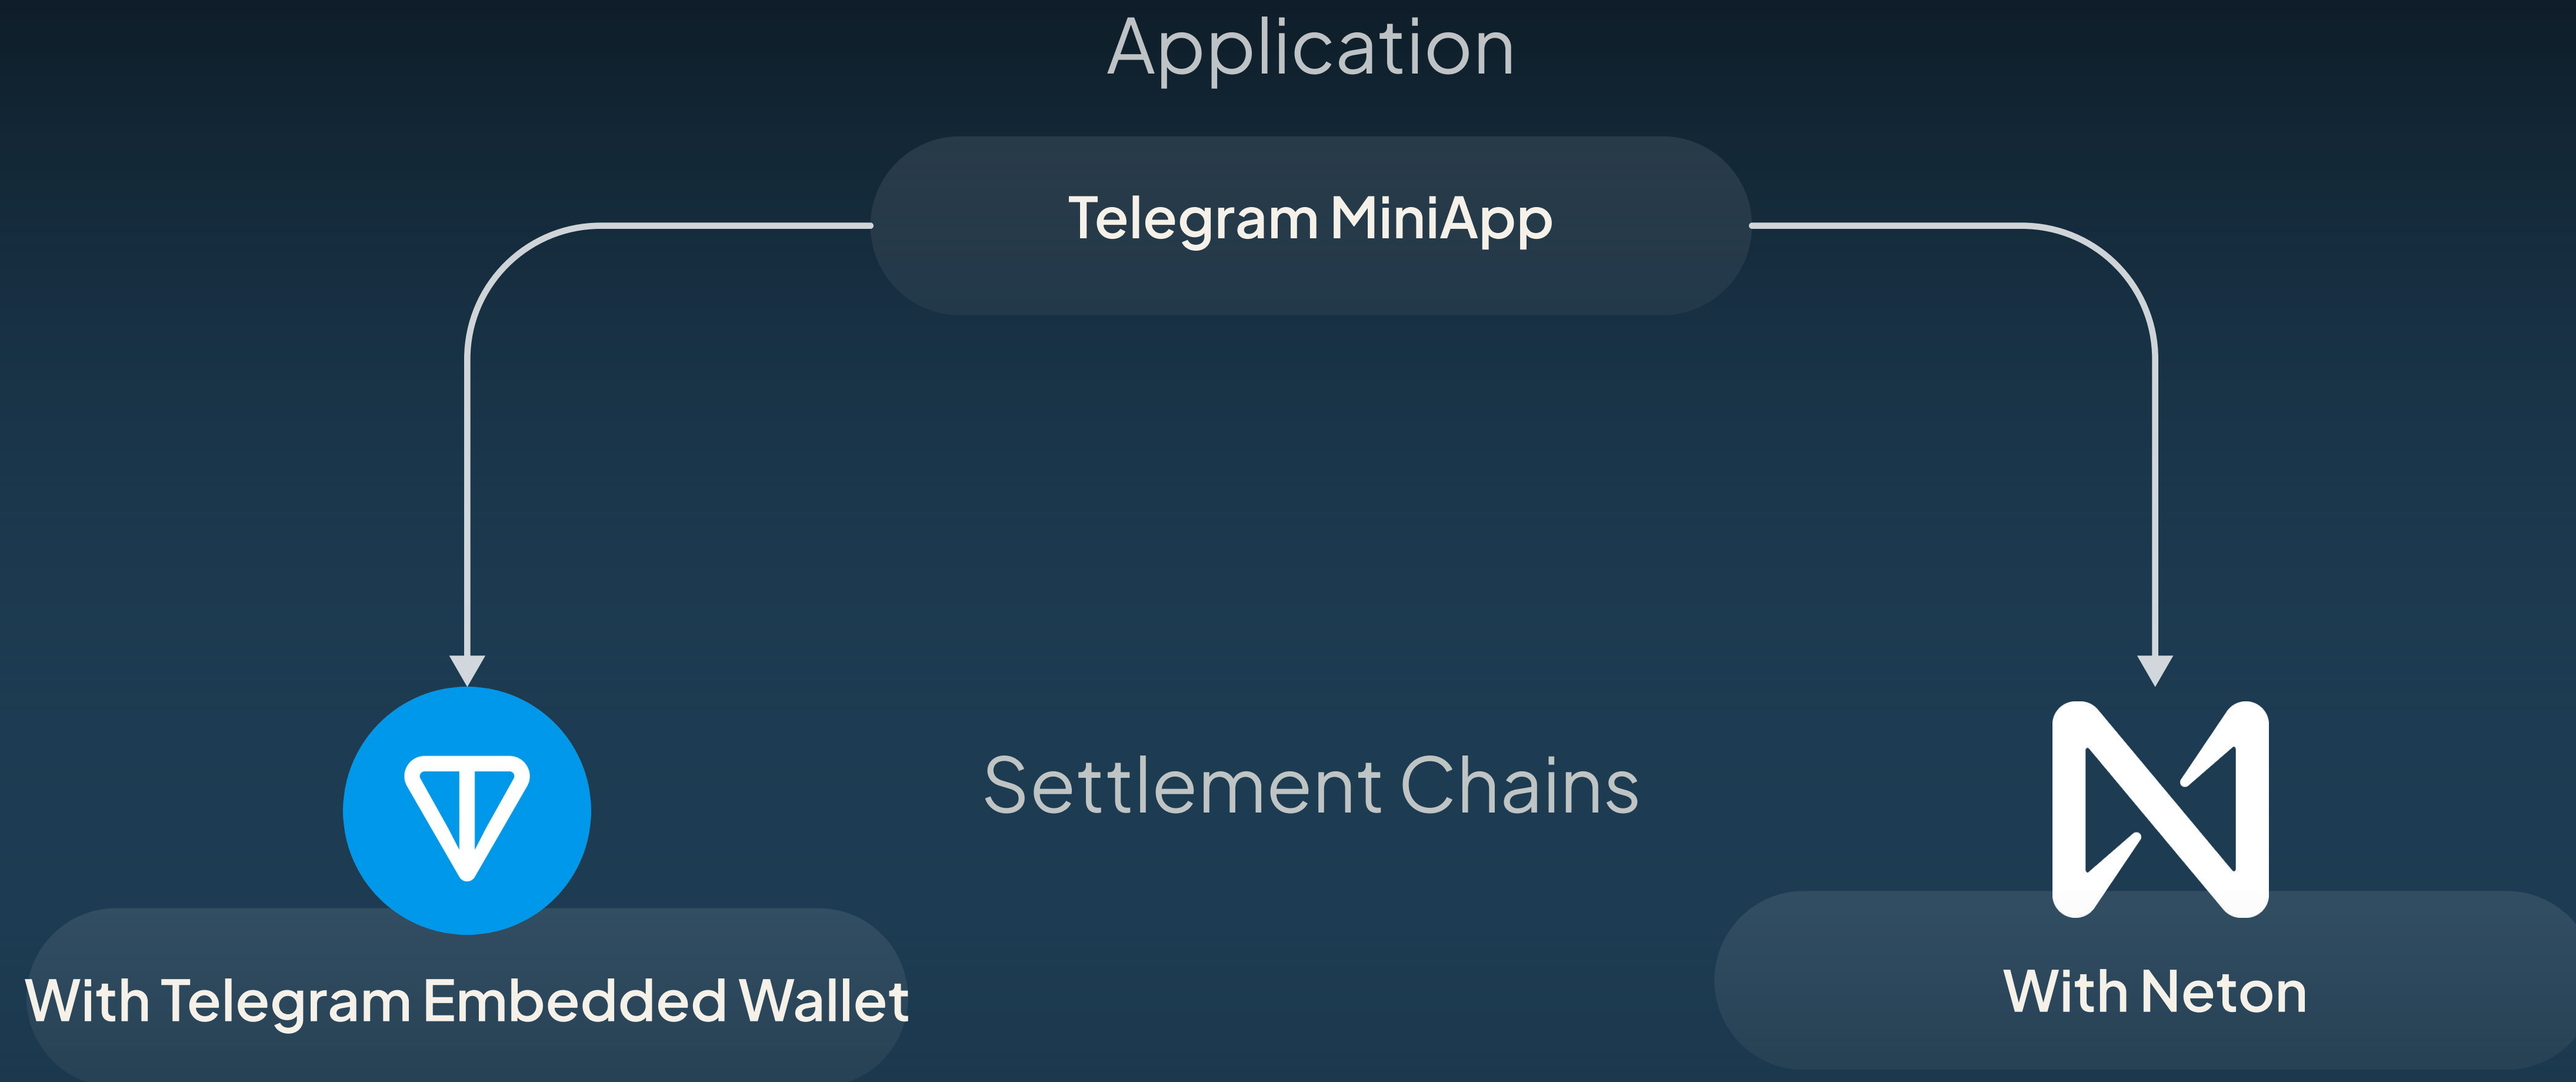

Application Layer – MiniApp

Settlement Layer – TON

# ✦ Near as another Settlement Chain

# ✦ Advantages of MiniApp Ecosystem

Simple Deposit

In-App Payment

Social Integration

# ★ Huge If It Works

1B

Telegram Users

80 M

Stay on MiniApp

10 M

Stay on Near

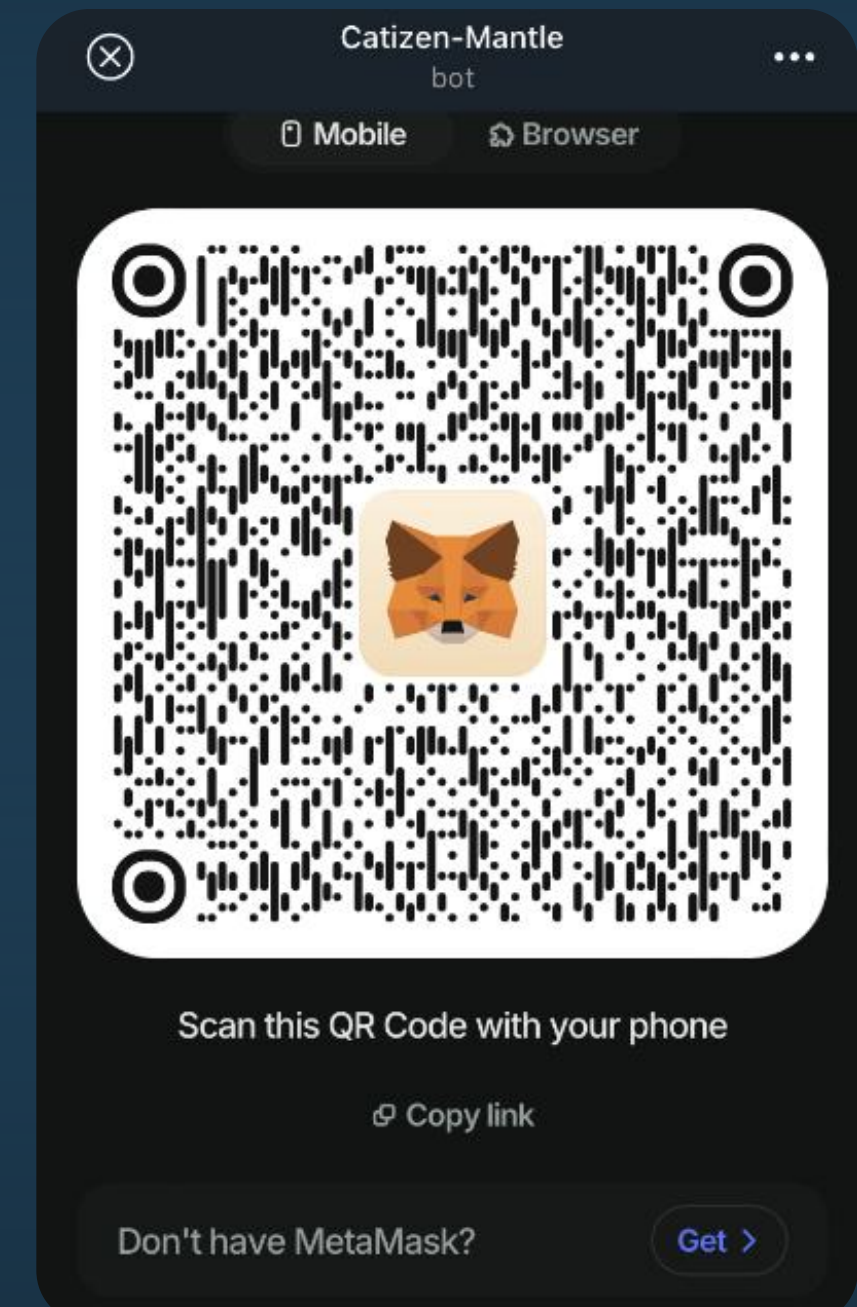

# ✦ Problem: Bad UX of Non-Native MiniApp

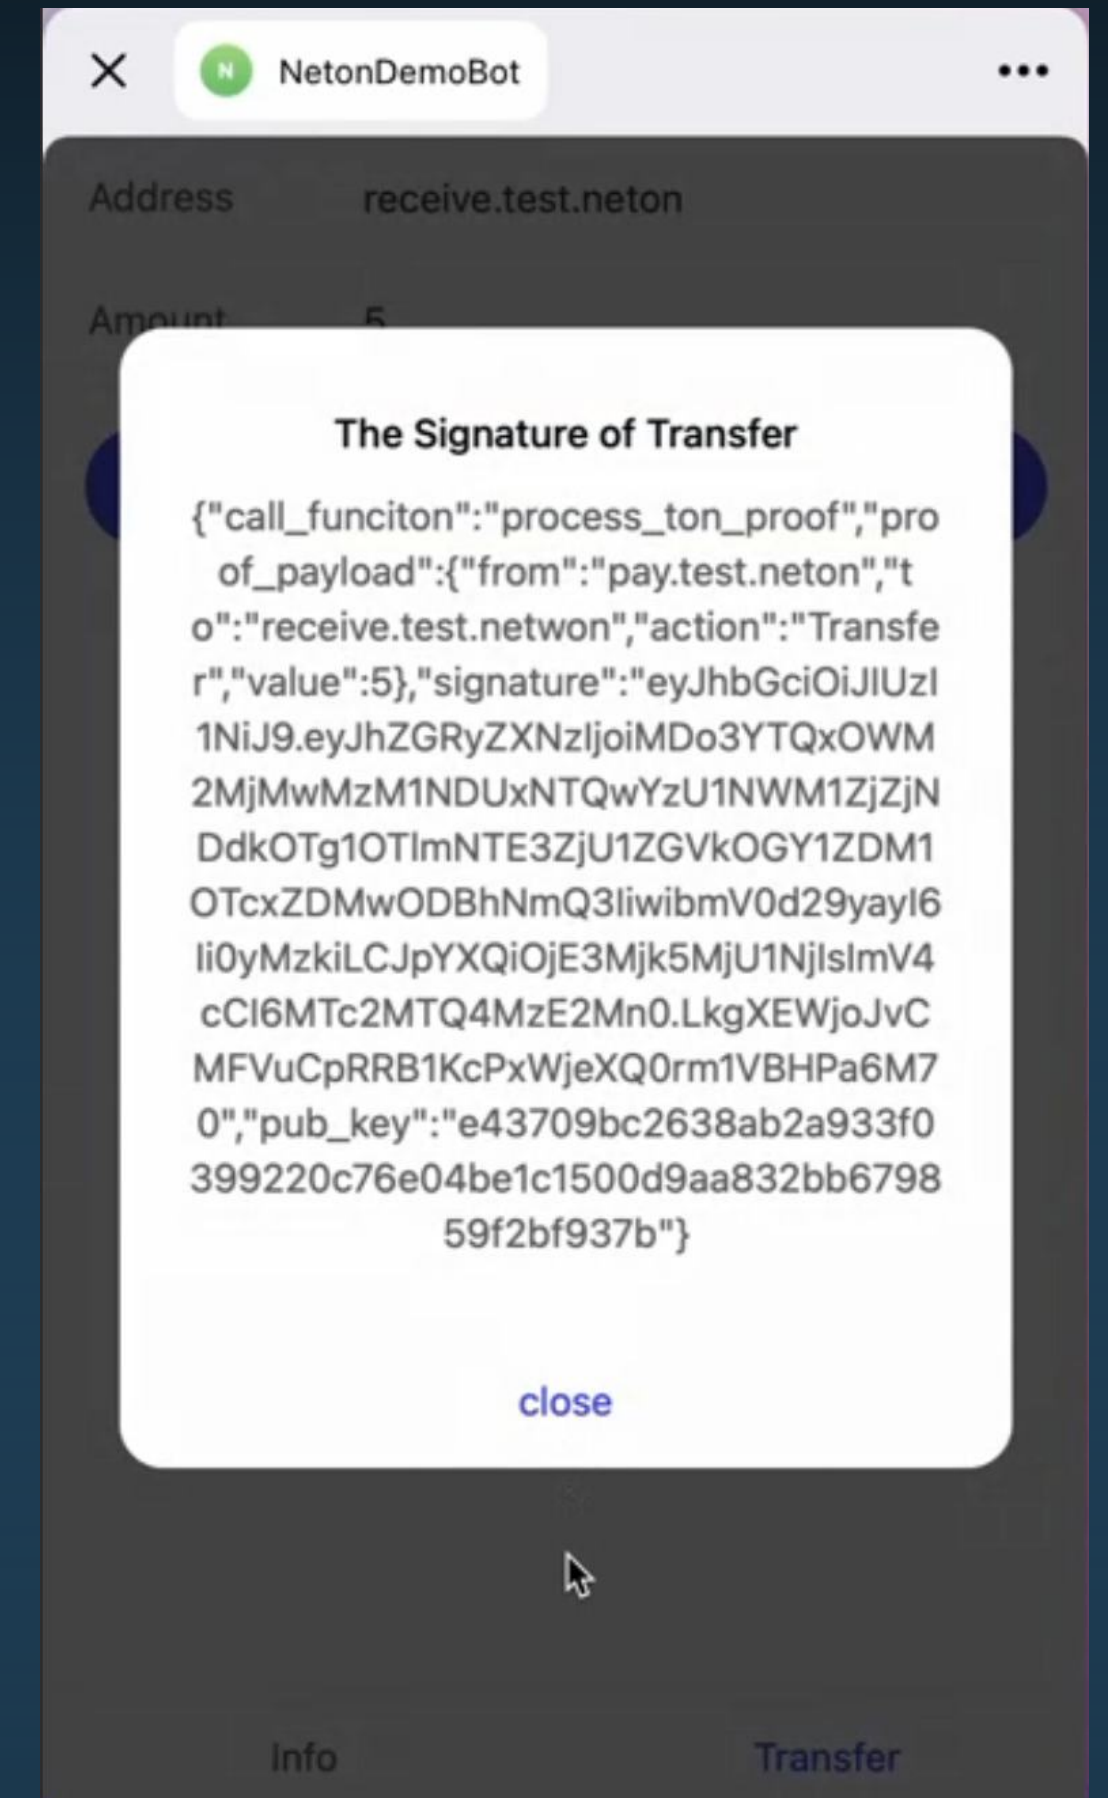

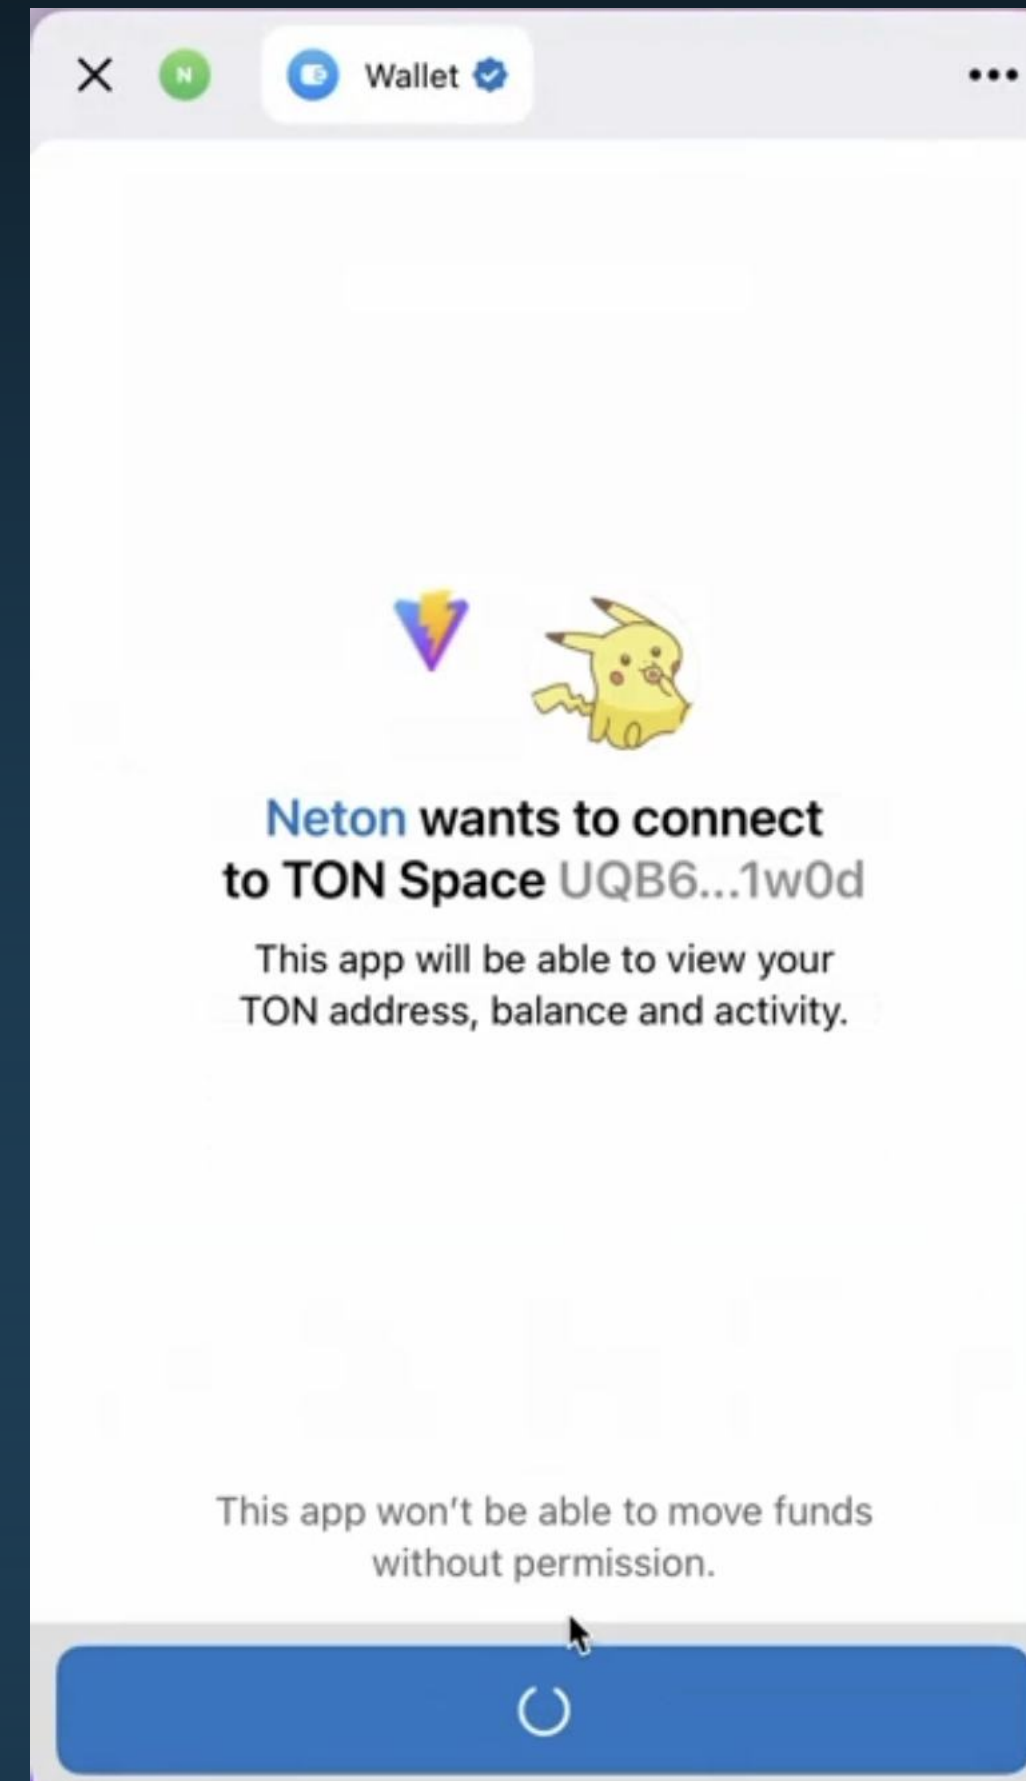

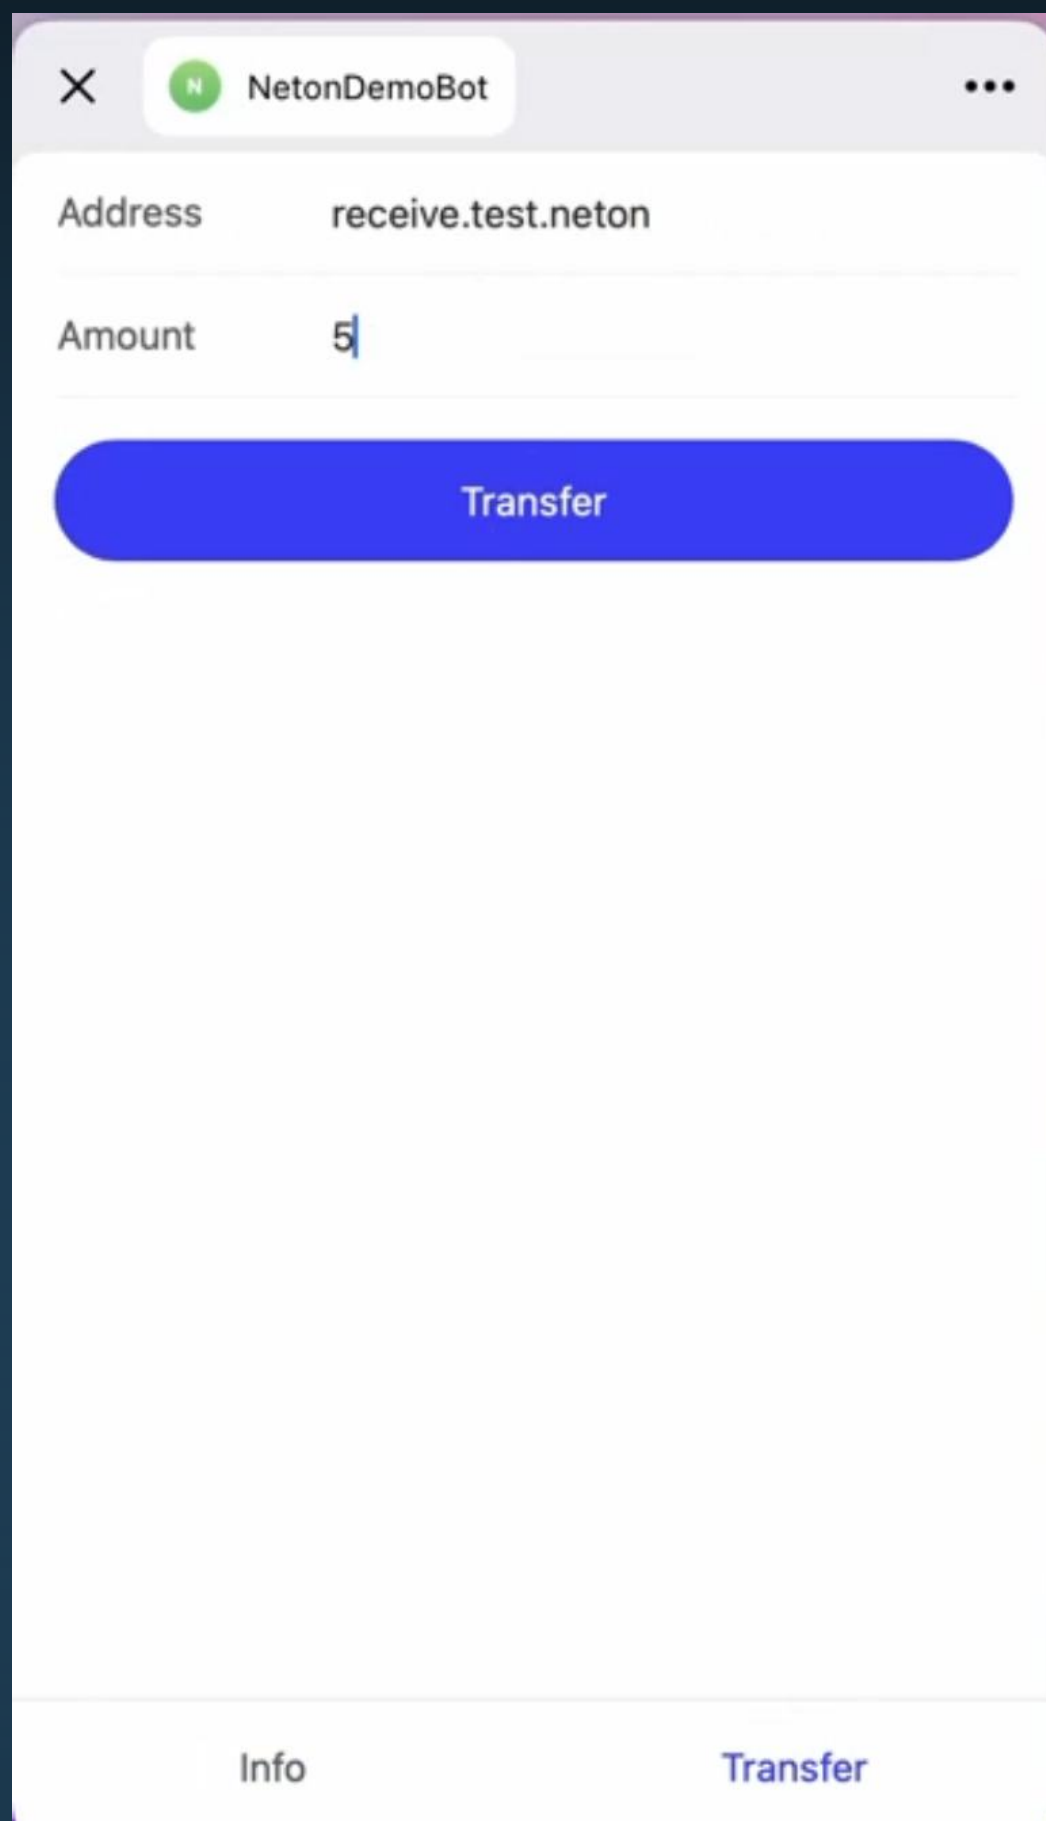

TON's native mini-app uses Telegram embedded wallet and have **seamless one-stop experience**.

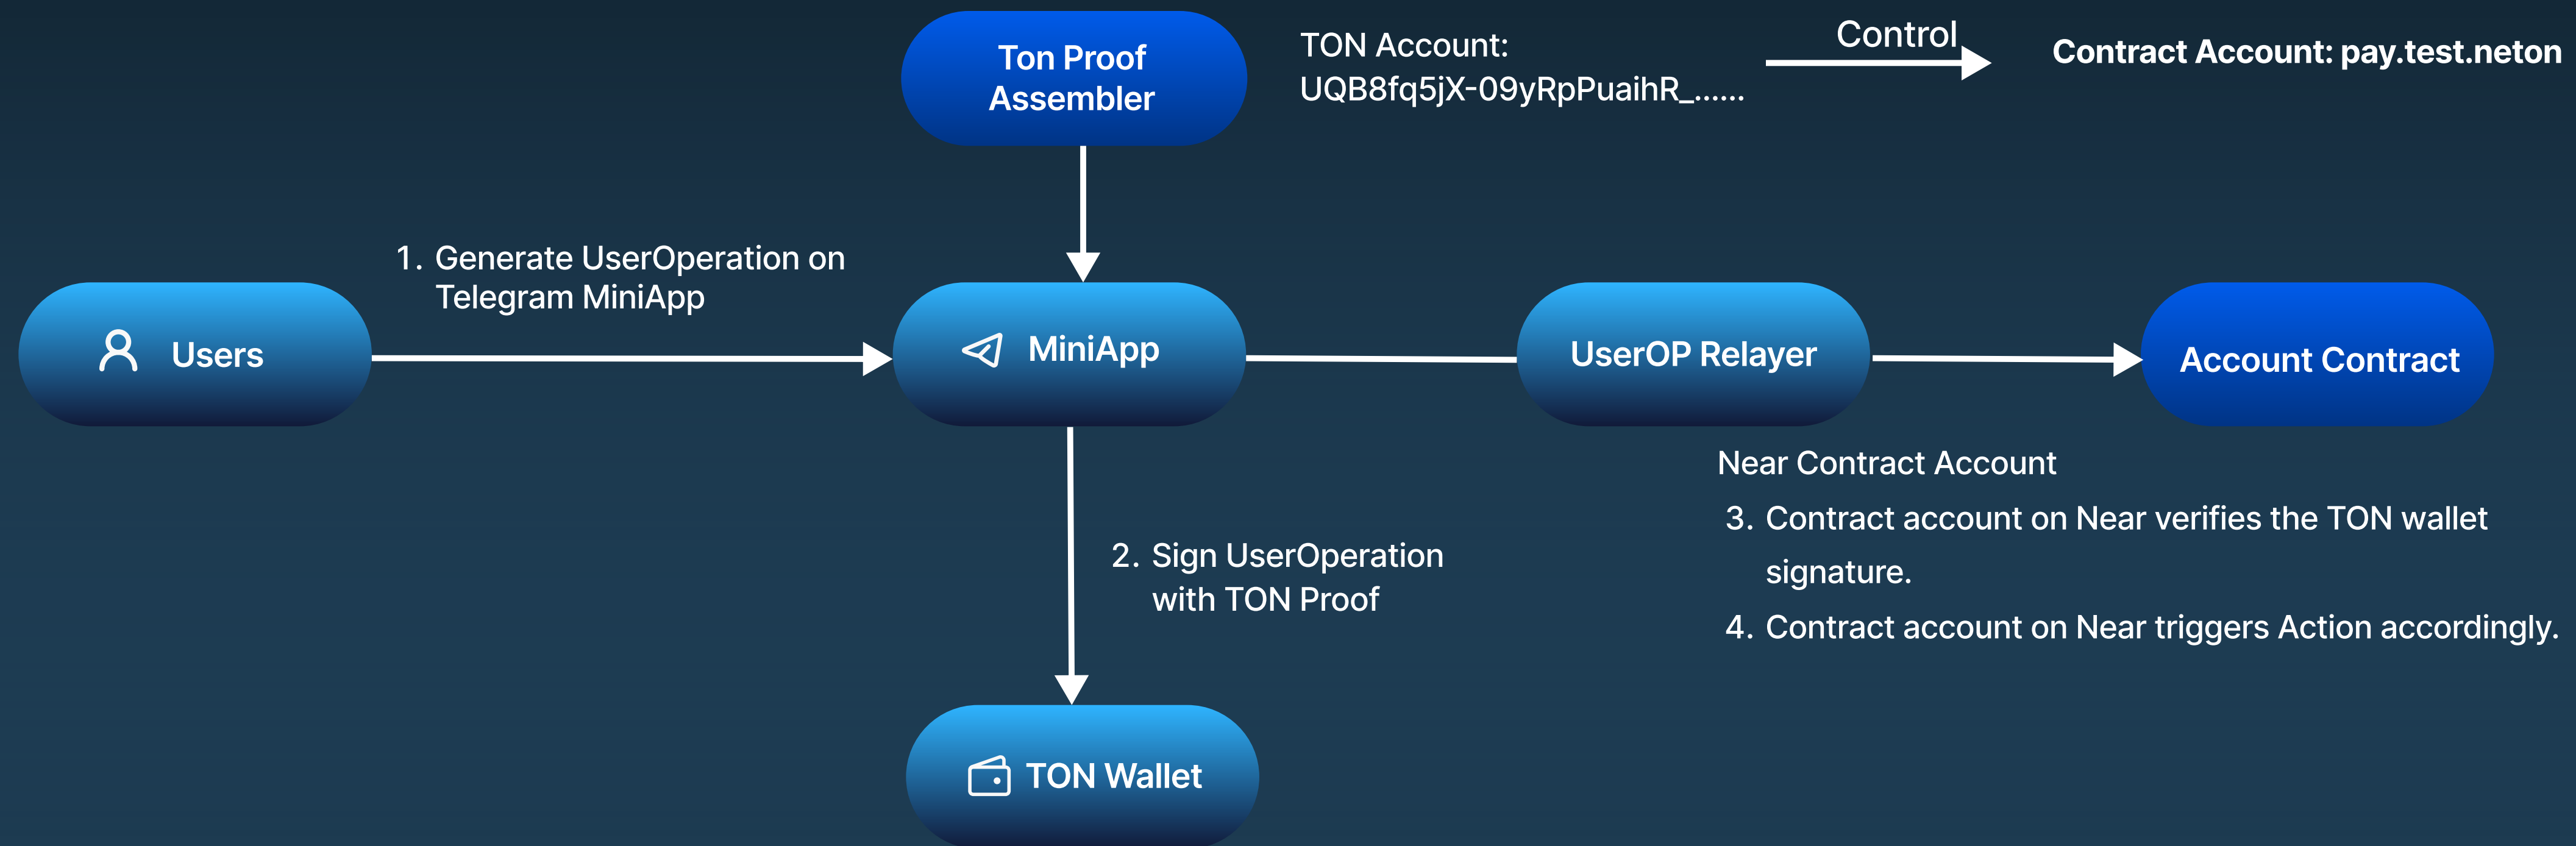

Non-native mini-apps **disrupts the user experience on payments and any other on-chain interactions.**

✦ Neton provides 'Native' UX for Near MiniApps

# ✦ Neton Protocol

# ✦ Winning Factors of Neton

The **ED25519** signature algorithm used by Ton is supported on Near, but it is not supported on Ethereum. This makes MiniApps can issue assets on Near natively.

Verifiable

Decentralized

Easy Control

# ✦ The Future Work

## Cross-chain Swap Integration

Users could interact with Near and swap assets between TON and Near.

## SDK Release

Comprehensive and user-friendly SDK

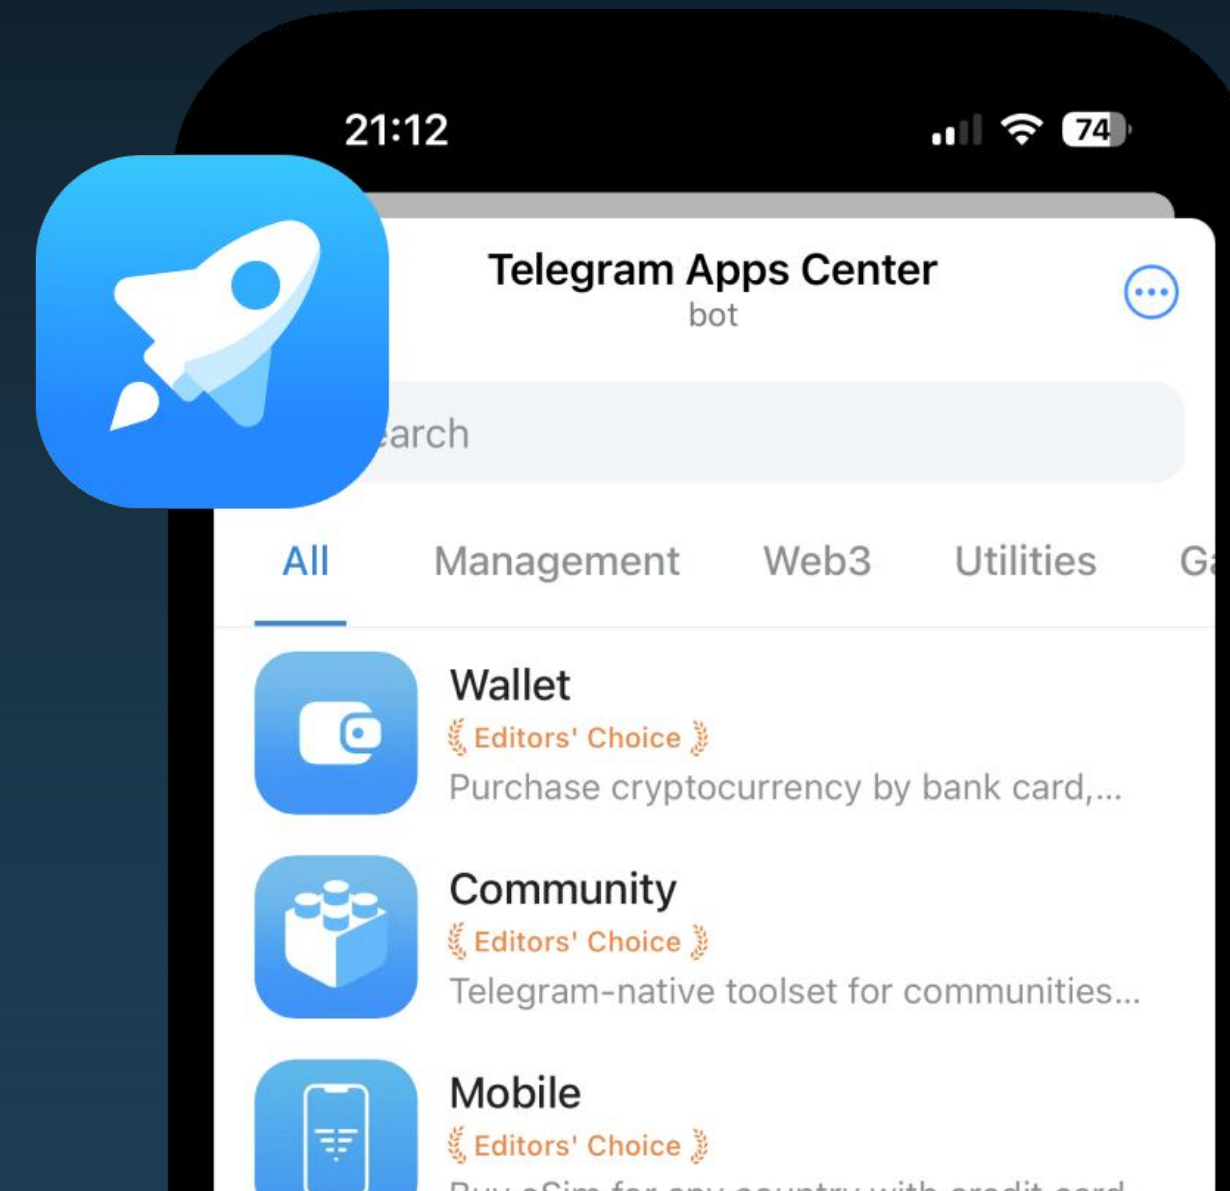

## Contract Enhancement

Secure contract account system and Paymaster

# ✦ Neton – Vision

Make Near as a new settlement layer for Telegram.
